SUMMARY

This sheet highlights key clinical and operational patterns. Billing amounts are evenly distributed across major medical conditions, each contributing around 0.23–0.24bn. Admissions are balanced across Elective, Emergency, and Urgent types, with each recording about 2192 cases. Blood types show similar patient counts of roughly 7K each, indicating a well-distributed demographic mix. Disease counts across years remain stable, with major conditions averaging 1.7K–2.0K cases annually. Overall, the visualizations show consistent trends across conditions, admission types, and demographics.

Dashboard Summary

This Healthcare Analytics Dashboard presents key operational and clinical KPIs, including **Admissions Count by Year**, **Average Length of Stay (LOS)**, **Test Result Distribution** (Normal, Abnormal, Inconclusive), and **Total Billing Amount**. These KPIs provide insights into patient flow, hospital efficiency, diagnostic outcomes, and financial performance.

Interactive slicers for **Medical Condition, Age, Gender, Blood Type, and Year** allow users to filter and explore data across different patient groups. The detailed patient table supports deeper clinical analysis by displaying medical condition, medication, LOS, and test results. Overall, the dashboard delivers a clear and interactive view of major healthcare performance indicators for better
